

December 2016 Board Report

By Maintenance Director Jeromy Hoeldt

My Board Report will be very brief because my department and myself have been completely consumed for the last two weeks with building issues caused from the current cold snap.

From Kalskag to Stony River my entire staff has been working our hardest to get our building temperatures comfortable and it has been extremely challenging.

We were called and told there was no heat in CHU and it was 30 below outside and the building was cooling off fast so we drove up there and after a long period of time we were able to get the heat fixed.

We just finished thawing out the JOGES sewer line, which was froze solid and we have almost finished thawing out one of our teacher housing units in Kalskag. The sewer line froze there too and did some damage to the pipes.

We are currently waiting for our pilot to return so we can address building issues in CKD and SRV.

I have been involved in many other aspects of maintenance that I can discuss in person at the board meeting if the Board wishes to.
